

TECHNICAL SPECIFICATIONS

Sterzo, the Elite Riser Block with steering functionality, is one of the most interesting additions to your indoor training sessions as it lets you **control your handlebars** as if you really were on the road.

Place the front wheel on the steering unit and enjoy **the most realistic indoor ride** you can have on your home trainer.

While you turn the front wheel to the left or right on **Sterzo**, you can employ the steering features offered by your indoor cycling software of choice when available by mounting your phone on your handlebars in order to track its rotating movement.

Find out more on how to quickly enjoy a truly exciting ride on your bike with **Sterzo**.

HOW IT WORKS

Sterzo features a registered design consisting of a raised support in fiber-reinforced polymeric material that also includes a patent-pending **rotating pivot** for you to easily place the front wheel of your bicycle.

(Accommodates tires as wide as 56mm).

The rotating unit was designed to impart the **greatest bicycle stability** while you're riding on your home trainer, as well as ensuring

maximum freedom of wheel movement to the left and right, up to 34° rotation on each side.

The rotating pivot features a practical **automatic return system** for you to easily get the handlebar back to its original position.

Sterzo also features practical **anti-slip rubber** feet on its base for you to have even more stability in your rides as well as protecting contact surfaces from any potential scratches and abrasions.

Recommended with the Elite **Training Mat** for maximum performance.

IMMERSIVE TRAINING EXPERIENCE

Lately, the indoor cycling world has been abuzz with new and innovative tools and functionalities to make home training on your bike an ever **immersive and engaging** riding experience.

Among them, steering is undoubtedly one of this year's hot topics.

This is why **Sterzo** is one of the most interesting innovations for your indoor training ecosystem.

Especially if you consider that other than facilitating the handlebars movement, this steering block allows you to take advantage of

the ever-evolving **steering options** offered by **your favorite indoor cycling software**.

If implemented by your favorite cycling software, steering features can enable users to control their avatar on-screen, change direction and overtake other bicycles by simply mounting their phone to their handlebars.

The phone will track handlebars movement on **Sterzo** via complementary app and send data right away to your software of choice.

ELECTRONIC VERSION AVAILABLE

Sterzo is also available in electronic version, **Sterzo Smart**.

The Elite **Sterzo Smart**, with its double **ANT+™** and **Bluetooth communication** protocol, wirelessly interacts with **Zwift** via Bluetooth compatible apps and software to communicate front wheel movements directly, without a phone on your handlebars.
